## THE COLOUR RANGE

## EXPLANATION OF THE SYMBOLS

### Lightfastness

+++ = at least 100 years lightfast under museum conditions, 57 colours)

++ = 25 - 100 years lightfast under museum circumstances, 13 colours

The lightfastness has been tested according to the ASTM norm D4303. The colours illustrated correspond with the real colours as much as possible.

### Opacity/transparency

Depending on the type of pigment, a colour is either (semi-) transparent or (semi-)opaque. The symbols are explained as follows:

- = transparent (8 colours)
- = semi-transparent (8 colours)
- = semi-opaque (23 colours)
- = opaque (31 colours)

### The pigments - Colour Index

The pigments used in Amsterdam Acrylics are indicated according to the Colour Index. The Colour Index is a system applied internationally for pigments and colouring agents used in all types of paint (thus including artists' colours). The system is based on a number and name relating to the chemical structure. The Colour Index was originally developed in the U.S.A. which is why the descriptions of the chemical classes are given in English. The meaning of the abbreviations is as follows:

PW = pigment white	PY = pigment yellow
PO = pigment orange	PR = pigment red
PB = pigment blue	PV = pigment violet
PG = pigment green	PBr = pigment brown
PBK = pigment black	

### Packaging sizes

- = tube 120 ml (70 colours)
- = tube 250 ml (70 colours)
- = bottle 500 ml (50 colours)
- = bottle 1000 ml (40 colours)
