# HOLBEIN PIGMENT PASTE

Holbein Pigment Paste does not contain any adhesive agents on its own and is not suitable as an actual paint unless adhesive agents are added.

Holbein Pigment Paste cannot be used to produce oil based color.

Some adhesive agents may not work well with Holbein Pigment Paste. It is recommended to test a small amount first to ensure proper compatibility.

Pigment is a fine powder used to make paint. Pigment tends to stick together and usually comes in lumps. If these lumps are mixed with an adhesive agent, it will result in grainy paint.

Holbein Pigment Paste, available in 20 colors in 35ml squeeze bottles, has been ground to achieve superior results when used as a base colorant to produce your own paint. Pigment Paste may initially pour out in small lumps, but will return to perfect mixing consistency by just adding a little water.

Artists can then make various forms of paint by adding an adhesive agent like gum arabic, acrylic emulsion or glue among others. Holbein Pigment Paste can also be used to customize the concentration of paint by adding it to commercially available water soluble artist color and mediums.

PP193 Set of 18

PP008 **A**  
Naphthol Red Deep

PP014 **A**  
Pyrrole Red

PP016 **A**  
Pyrrole Orange

PP031 **B**  
Isoindolinone Yellow

PP034 **A**  
Imidazolone Yellow

PP038 **A**  
Hansa Yellow Light

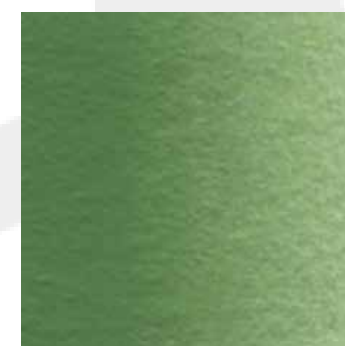

PP043 **A**  
Yellow Ochre

PP051 **A**  
Phthalo Green

PP053 **C**  
Shadow Green

PP065 **B**  
Oxide of Chromium

PP072 **A**  
Phthalo Blue

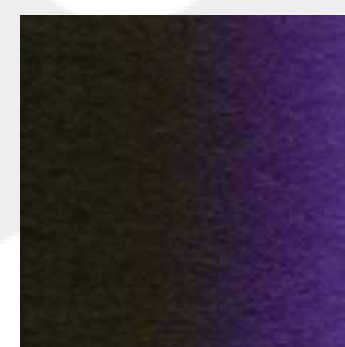

PP075 **B**  
Indanthrene Blue

PP079 **C**  
Cobalt Blue

PP081 **A**  
Ultramarine Blue

PP091 **B**  
Dioxazine Violet

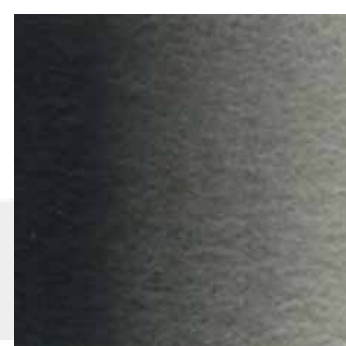

PP096 **B**  
Quinacridone Magenta

PP117 **A**  
Red Ochre

PP119 **B**  
Imidazolone Brown

PP134 **A**  
Carbon Black

PP141 **A**  
Titanium White

PP 081  
Ultramarine Blue  
35ml
