

The Essential Choice!

Pigma ink, invented by Sakura over 25 years ago, continues to be the most reliable permanent ink on the market today. Artists, consumers, the government, and scientists consider Pigma Micron a necessary basic tool for any archival-quality, handwritten project.

This permanent, fade resistant, chemically stable, pigment-based ink will not bleed or run if liquids are spilled on or applied to the document after the ink has dried. Perfect for legal situations, Pigma ink is nearly impossible to alter on documents, in log books, or on checks. It's no wonder architects, archivists, anthropologists, entomologists and laboratories depend on Pigma Micron for record keeping.

Manga artists, professional illustrators and watercolorists use the six point sizes to create precision lines. Scrapbook enthusiasts and crafters require its archival quality for preserving memories in journals, and for making cards, quilts and dolls. Use Pigma Micron to leave a mark that will last a lifetime.

Scientific Discovery

Sakura's scientists invented pigment ink as an alternative to the unstable dye-based inks available at the time. The superior pigment-based inks are more chemically complex and 100 times larger than dye molecules. This makes pigment ink less susceptible to UV rays, chemical degradation, and pollution from contact with oils and other chemicals. However, pigments by themselves do not guarantee that an ink is permanent. Sakura refined Pigma® ink to reduce the pigment molecules to a submicron size and added resins. Consequently, Pigma[®] ink flows well, dries to a neutral pH, is fade-resistant, waterproof, and lightfast.

"Creating repetitive patterns has been a human tradition throughout times & cultures. It is entrancing to experience the beautiful deep black ink flow from a Pigma Micron onto archival paper." Rick Roberts & Maria Thomas, Zentangle® founders

"Thirty years ago, I illustrated travel journals carrying a pen & ink in my purse. Micron pens changed my traveling life & saved my purses from ink stains. Now all my journals & books are created with them." Diana Hollingsworth Gessler, painter, illustrator, author

TESTIMONIALS

 $\star \star \star \star \star$ "The technologically advanced pigment-based ink is specially designed for archival permanency and helps prevent check washing fraud."

> Heidi Harralson, court-gualified, board-certified forensic document examiner

 $\star \star \star \star \star$

"As an analyst working in the art conservation community, I am very much aware of the artist's need to avoid fugitive materials. Micron pens are wonderful: as pigments, they're virtually indestructible, and non-acidic, so they won't harm the artist's creation."

Joseph Barabe, art analyst, fine art photographer

 $\star \star \star \star \star$ "I use the Pigma Micron to write ID numbers into each hand woven and blocked Montecriste hat. The number is written on the inside of the hat. The challenge is during the hand finishing process when the hats are dusted with sulfur powder. There are no signs of the flow slowing, and the weavers mark survives the trials of steam and irons in the shaping process for each hat."

> B. Brent Black, founder of The Panamanian Hat Company of the Pacific, The Montecristi Foundation

"Pigma Microns initially appeal to the artist due to their waterproof, archival inks, & reasonable price. In application, the pens are wonderfully responsive, consistent & durable."

Phuong-Mai Bui-Quang, manga artist, PMBQ Studio founder

"Pigma Sepia gives an old masters quality to sketches. The ink permanency means the work will last throughout the years. The fine lines of the Micron pens allow for exquisite detail." Susan Tilton Pecora, watercolor show host

"We use Pigma Micron 005 to write specimen data on a 15mm x 7mm labels. Used on proper paper, the ink withstands storage in water, alcohol & other liquids typically used in wet insect collections. Our samples are in 70-80% alcohol, both black & color pens, dating back to 11/22/1987." Jerri Larsson, BioQuip Products, Inc.
